PRODUCT SAFETY AND REGULATIONS Our products should not only be fun and fulfill their function perfectly but should also be safe. It may have harmful effects when humans put products in their mouth than contain phthalates. A study by the Department of Environmental Medicine of the University of Erlangen has proven this. Tests showed that phthalates have an effect on the hormonal balance. Small children are especially sensitive. KUM® has paid close attention for many years to produce products without such harmful substances. Please inform your customers about this.

REACH We adopt the status of a downstream user and also, in one case, as importer, for the supply chain described within the REACH-Regulations. The pre-registration has been submitted.

DIN EN 71-3 All our products are in accordance with the regulations defined in EN 71-3.

PACKAGING Our sales and transport packaging are in accordance with the new packaging law (VerpackungG) valid as of 01.01.2019.

We reserve the right to change prices, packaging and colors due the economic necessity or necessary ecological adjustments.

This is KUM®

In 1919, Fritz Mußgueller and Adam Klebes founded the KUM company. After Fritz Mußgueller's death, his son-in-law Dr. Werner Lüttgens took over the company. The company is still family-owned and is today managed by Dr. Fritz Lüttgens and Patrick Becker.

In the early days, KUM only produced pencil sharpeners. The focus was on sharpeners without containers, and a large area was on fancy sharpeners. Many of the sharpeners, such as the 100-1 or the 400-5, are still a solid pillar in the product range today.

1928 was the birth of the globe, a classic that has been renewed again and again due to geographical changes. In this year, KUM took part at the Leipzig fair for the first time. Since then, we have presented the latest developments every year at Paperworld and many other international trade fairs.

In the 1930s, the company was still powered by water power. The creek for this was diverted especially for KUM. In order to continuously guarantee high quality and to maintain independence, KUM integrated its own mould and tool making into the company in the 1950s. To this day, the injection moulds and a large part of the machines are designed and built in-house.

In 1956, the production of drawing instruments began. Many other categories were added over the years. Writing aids, school painting brushes, professional art brushes, writing pads, colouring boxes, scissors and much more.

In addition to a broad and high-quality product range, customer satisfaction is our top priority. With our own sales department, we maintain a cooperative relationship with the specialised trade.

Today, we can proudly say that we are the oldest existing manufacturer of pencil sharpeners.

DYNAMIC TORSION ACTION®

We are the only manufacturer in the world to equip our sharpeners with a curved blade. Due to the curved blade form, the cutting edges are under constant tension and cannot “curl-up” as a result of the ensuing pressure during sharpening.

This in turn prevents rebounding or cracking of the pencil tip. Furthermore, the pressure against the screw-head prevents it from lifting or loosening.

KUM® BLADES

Probably the most important component is the blade. If a blade does not work cleanly and reliably, i.e. sharpen the pencil with high precision, then the entire sharpener is worthless.

Our blades are manufactured with a measurement tolerance of 5/100 mm. Equally important is the hardening of these blades. We harden the steel with 64 HRC. For comparison and understanding: top knives for use in the kitchen have a maximum of 53 HRC. These sub-processes are the most complicated in the manufacturing of the product. This hardness is necessary because pencil leads contain clay, which is a type of stone. Normally, metal is ground down with stone, but the pencil sharpener does it the other way round!

KUMINOX

KUMINOX is a surface finishing process. It protects the surface from corrosion and gives it an incomparable silky matt, elegant shine.

KUM MAGNESIUM

Precision Magnesium sharpener body: Most of our sharpeners are made of magnesium alloy. Fine tolerances are needed by a sharpener in order to hold and shape a pencil point properly. KUM therefore created their own mould construction department and a mechanical engineering department. In this department we just have qualified workers, with the Engineering Master in mould making. All steps, from the mould-machine production to the finished product, are done “in-house” to ensure the same constant level of high quality.

Magnesium is hard enough to be worked with a milling machine at these tolerances. Some competitors use aluminum, which is too soft and malleable for this type of milling, although much cheaper than magnesium. Other competitors use a die-cast metal body, which cannot be made with as much precision.

Magnesium is the 8th most common element in earth, supposing a 1,4% of nature. It is a “silver” mineral, similar to the aluminium, but with some special characteristics, as it is, being a light metal, the most lasting one; therefore, it is used nowadays in the aerospace industry to build engine blocks and plane wings.

Additionally, is needed by every living organism to survive. It is absolutely non-pollutant. Then, it is used not only for its superior characteristics but also for environmental reasons.

Magnesium is the ideal material to produce sharpeners with the highest precision.

KUM 4-in-1

Fits perfect with all pencil brands

Whether 7, 8, 10 or 11 mm diameter pencils, you will hardly find a pencil that this sharpener cannot handle. Almost every pencil can be sharpened with the 4-in-1 into a perfect point.

The world's first 4-hole sharpener works with round, hexagonal and even triangular pencils.

Equipped with:

- High Carbon Steel Blade
- Dynamic Torsion Action®: prevents pencil tip from "springing out"
- KUM Dust Stop® System, keeps waste in the container

Sustainability

BIOFIBRE®

These products are 97% made out of the bio-based plastic Biofibre® Silva. Only renewable raw materials are used (no fossil raw materials). As a result, these products have a much lower carbon footprint than products made out of conventional plastics. This material is DIN CERTO certified.

The world's oceans have degenerated into a garbage dump, with large areas full of plastic waste. According to the German Federal Environment Agency (FEA), up to 140 million tons of waste float in the world's oceans.

The consequences for the environment are devastating. According to a study, around six to ten percent of global plastics production ends up in the oceans. It can be assumed that up to 30 million tons of these end up in the world's oceans. Plastic waste enters our oceans via rivers or direct routes and is broken down by environmental influences such as wind, UV radiation or tides into so-called secondary microplastics.

The substitution of plastics by biodegradable materials such as Biofibre® granule can contribute in the long term to reducing the mountain of plastic waste on land and in water and to making our environment more livable again.

PCR – POST-CONSUMER-RECYCLED MATERIAL

PCR materials are recycled plastics that are obtained from household or commercial waste, the majority of which consists of packaging materials.

WHY IS PCR GOOD FOR THE ENVIRONMENT?

PCR is environmentally friendly for several reasons:

- It saves natural resources, which means that there are less CO2 emissions during oil production.
- A new product is being created instead of an old product being dumped on a landfill, dropped in the ocean, or disposed of in a waste incinerator, thus generating more CO2 emissions.
- Plastic that is discarded in nature (e.g. in the ocean), breaks down into micro-plastic, which cannot be seen with the naked eye, and ends up in our food chain. Recycling is a way to avoid this.

Drawing instruments

Precision for more than 100 years

Uncompromising precision – measuring is all about accuracy, right from the start. For decades, we have been experts in the production of high-quality drawing instruments.

Temperature-normalised hot stamps and precision moulds guarantee exact scaling for precise measurements.

Our raw materials used are of course free of phthalates and other dangerous plasticisers.

KUM® STOP&GO

This series sets new standards for drawing instruments. Its innovative, patented STOP&GO Grips provide precise fixation, ensuring millimeter-accurate work. The grips keep the instrument firmly in place, preventing slips during parallel or lengthwise movements.

The SUPER GEO1 CHEATPOINT® combines essential drawing tools into one, making geometry lessons a breeze.

- # Quick 360° orientation with the Cheat Point Angle Rose
- # Reduces reading errors with secure triangle positioning
- # Full-circle angle rose enables intuitive use of the geometry triangle

Ergonomics

KUM® SATTLER TRI GRIP

In collaboration with Dr. Barbara Sattler, we developed the KUM® Sattler Tri-Grip, a trusted ergonomic tool combining thoughtful design and functionality. The Tri-Grip promotes an optimal tripod posture without restricting the fingers too much; it accommodates the personal posture of each person. A wrong posture is hardly possible due to the triangular shape and the clear positioning of the middle finger. This is further supported by the nubbed and curved underside.

The thumb and index finger are located close to the pen in discreet finger recesses with restrained elevations. This ensures a pleasant writing experience. The bevelled front of the Tri-Grip provides a better view of the writing and the tip of the pen. The non-slip material ensures that you don't slip off despite the pleasantly smooth surface. On the top of the Tri-Grip is an indicated pencil, which shows in which direction it is to be placed on the pencil.

4 064900 154610

Whether for pencils, colored pencils, ball-point pens or even brushes: the Sattler Grip and Sattler Tri Grip writing aids are suitable for all common pencil formats. Writing beginners learn the correct pen position right from the start.

For frequent writers, whether at school, university or at work, the writing aid is a relieving writing support.

- Ergonomically ideal for left and right-handers of all ages.
- The pleasantly non-slip material is guaranteed free of toxic substances and prevents allergic reactions. No slipping despite the pleasantly smooth surface.
- On the top of the writing aids there is an indicated pencil and shows the correct direction for attaching it to the pen.

KUM® SATTLER GRIP

The Sattler Grip is a patented new development that gently brings the fingers into the ergonomically suitable writing position. This product was developed by Dr. Johanna Barbara Sattler together with KUM® to provide an ideal writing aid for left- and right-handers.

ADVANTAGES

- # puts the fingers in an ergonomic writing position
- # the "Pressure Feedback System" absorbs too intense pressure
- # the bead rim prevents crossing of the fingers
- # guaranteed free from toxic substances

Fits on almost all pens!

Left Hander Pencil sharpeners

Left Hander Pencil sharpeners

The left-handed child should have a special left-handed sharpener made available to them right from the start.

Here is how you use a left-handed sharpener:

- The left-handed sharpener is held in the right hand, making sure that the cutting blades are mostly pointed downward.
- The right hand is kept steady and does not move as the left hand turns the pencil in the direction away from the body.

In this way, with the “outward” sharpening motion, the child can develop more strength than vice-versa. Left-handed children who do not have a left-hand sharpener and use instead a right-handed sharpener, hold the pencil in their left hand while turning the pencil inwards, towards the body.

This motion requires more concentration and effort and is un-economical. Especially at the beginning, the pencil tips break because of the altogether unfamiliar movement that their tiny hands are still trying to figure out. This also leads to the children to sharpen less frequently or unwillingly the pencils.

Asking a left-handed child to adapt to a right-handed sharpener is not an optimal solution. The left-handed child holds the sharpener in their left hand and the pencil in their right hand (like a right-handed child), but the child actually uses their left hand and turns the sharpener inward toward the body. In this process the left-handed child is put at a disadvantage and sometimes this may create the impression of them being less skilled than their right-handed classmates.

Dr. Johanna Barbara Sattler: Linkshändige Kinder im Kindergartenalter, 3. Aufl., AAP Lehrerfachverlage GmbH, Augsburg

Left-handed children tend to look and work from right to left. A left-handed ruler favors this direction, the 0 mark is on the right side of the ruler and the end number mark on the left. Thus the tendency to look and work from right to left can be supported. This makes it easier for many left-handed children to work with the ruler.

DESK-PAD LEFTY®

Item no. 906.01.19

The pattern printed on the DESK-PAD LEFTY® for left-handers shows how to place the notebook/paper and hands in such a way that the child will develop a comfortable and relaxed writing position. This desk pad for left-handers is available as a colorful, durable, wipe-clean plastic pad with a non-slip surface.

It is a great help to all left-handers – not only at school but also in kindergarten. At this early stage it helps and encourages them to adopt a relaxed position when drawing and making their first attempts at writing.

PU 10 Pcs. / Carton 10 Pcs.

EAN

4 064900 048285

Packaging EAN

4 064900 148282

The desk pad will fit on any school desk and should also have a place in the left-handed child's room.

It also offers basic support to both converted left-handers who are going back to using their left hand and to patients, who must learn to write with their left hand after losing control of their right hand. Please take into consideration that the inclination angle to the right is ergonomically more favorable but will require some time to get used to.

Children that have become used to a different inclination angle for positioning their notebook/paper will sometimes in the beginning react sensitively to this change.

School & Art

SCHOOL & ART - PERFECT FOR SCHOOL AND HOBBY

Our School & Art brushes are the perfect solution for school and hobby. The synthetic fibers are elastic and suitable for different types of media such as watercolour and acrylic.

With our brushes you can achieve very vibrant and brilliant colours because they are easy to wash out.

The School & Art series is available in two versions. The round brushes have a pointed tip and are perfect for painting small details and precise lines. Colour gradients and larger areas are easy to create with the flat version.

These brushes are ideal for amateurs or for school purposes, to substitute some traditional animal hair like the pony, the ox ear or others. The synthetic fibers used to produce this brush are one of the first that appeared in the market when consumers were asking for synthetic fibers to substitute natural hair. Today, more than 30 years later, they are still used because they provide a nice ratio price/quality. Synthetic fibers last longer than those made of animal hair and accept solvents to be cleaned.

These quality brushes are completely non-toxic and correspond with EN 71-3.

GENERAL TERMS OF SALE AND DELIVERY

1) GENERAL

1.0 All our deliveries and the entire present and future legal relationships between ourselves and the purchaser shall be subject to the following conditions. Buying conditions of the purchaser being in whole or in part opposed to our conditions or to the statutory regulations are hereby expressly contradicted. Besides, as far as the contractual relations are concerned, German law shall apply exclusively. The application of the Convention Relating to a Uniform Law on the International Sale of Goods (EKG) and the Uniform Law on the Conclusion of International Sales Agreements (EAG) shall be excluded.

1.1 There exist no verbal side agreements. Agreements diverging from these conditions shall in the individual case only be binding if confirmed by us in writing; in particular, this shall apply to agreements with our representatives, fieldworkers and employees.

1.2 Our offer shall always be made without any engagement. Agreements - also such entered into on fairs or through our travelling salesmen and sales representatives - shall not materialize until our written confirmation of the order and its receipt by the purchaser. Our information stated in the confirmation of the order as to form, colour, size and quantity shall be made to the best of our knowledge, however not binding and without being considered as guaranteed properties. The purchaser shall inform us in writing of any deviations within 14 days after receipt of the confirmation of the order. After the expiration of this period of time the purchaser will not be able to claim false delivery.

2) PRICES

2.0 Our prices are understood for deliveries ex Erlangen. If, after the conclusion of contract, alterations of the calculation bases owing to higher labour- and material costs, increase of the legal value added tax or other circumstances, in particular calculation changes based on technical reasons, should arise we shall be entitled to carry out a corresponding alteration of the prices in an adequate relation to the changed calculation basis. This shall not apply if the purchaser is no merchant in the meaning of the German Commercial Code (HGB) and if our delivery is effected within 4 months after conclusion of contract.

2.1 Packing and forwarding expenses shall be borne by the purchaser, unless otherwise agreed in writing.

3) DELIVERY AND TERMS OF DELIVERY

3.0 Our confirmed terms for delivery are approximate terms and forwarding dates. In case the date of delivery agreed upon should be exceeded by more than 2 weeks, the purchaser shall be entitled to grant us in writing an additional period of time of at least 3 weeks. If the period of grace should not be observed the purchaser shall be entitled to withdraw from the contract by written declaration provided that the purchaser combined its grant of an additional period of time with a threat to withdraw from the contract.

3.1 The delivery of the merchandise shall be effected ex Erlangen. We shall comply with our obligation to deliver by keeping the merchandise ready in the works for their collection or by delivery of the merchandise to the forwarding agent, carrier etc.

3.2 In case the delivery or acceptance of the purchaser should for justifiable reasons not be effected in time we shall be entitled to withdraw from the contract if we have given notice of it - granting an additional period of time - by registered mail or telex 2 weeks before exercising the right to rescind the contract.

3.3 We shall be entitled to make part deliveries.

3.4 Business on fixed terms shall not be made.

3.5 Claims for damages of the purchaser because of delayed deliveries, even for positive violation of contract or tort, shall be excluded unless we had acted at least grossly negligently.

3.6 As far as circumstances not to be justified by us complicate, delay or make impossible the execution of accepted orders we shall be entitled to postpone the delivery, back order or part delivery by the duration of the disturbance or to withdraw in whole or in part from the contract. We shall not be liable e.g. for interferences of the authorities, operational breakdowns, strikes, lock-outs, work breakdowns due to political or economic conditions, lack of necessary raw materials and operating supplies, shortage of material, delays in transit due to traffic disturbances and circumstances beyond our control which occur in our works, those of our sub-contractors or in foreign works which the maintenance of our own works depends upon.

4) FORWARDING AND RISK TAKING

4.0 The forwarding of our merchandise shall be effected ex works at the risk of the purchaser, even in case the freight and other charges are borne by us. The merchandise shall be insured by us against damage to goods in transit and upon express written instruction and to the account of the purchaser.

4.1 Upon delivery of the merchandise to the forwarding agent, carrier etc. the risk shall pass to the purchaser and in case of part deliveries when these are made.

5) TERMS OF PAYMENT

5.0 30 days net, within 14 days 2 % discount. Payment has to be made as shown in our invoice.

5.1 Setting off counterclaims shall not be permitted; this shall not apply to counterclaims not contested by us or declared res judicata against us.

5.2 Payments shall only be considered as effected if we can definitely dispose of the amount. Payments by bills and cheques shall be accepted only on account of performance and upon special agreement. Discount- and bill charges shall at any rate be borne by the purchaser. If payment by bill was agreed, the maturity of the bill shall not exceed 90 days as from the date of the invoice.

5.3 If payment dates agreed upon are not observed by the purchaser we shall charge interest for delay to the amount of 2 % above the respective discount rate of the Deutsche Bundesbank (German Federal Bank) with the reservation of claiming a concrete further damage caused by default.

5.4 Incoming payments shall be used at our discretion for the settlement of the oldest or the least secured liabilities.

5.5 Part deliveries shall be invoiced immediately and shall be due and payable each separately irrespective of the termination of the entire delivery.

6) WITHDRAWAL AND DAMAGES

6.0 If the purchaser is in default with the acceptance of the delivery or a part delivery or if, having been reminded, it does not comply with its payment obligation, we shall be entitled after having granted an adequate grace period to withdraw in whole or in part from the contract or to claim damages because of non-performance to the amount of 20 % of the purchase price, save the assertion of a concrete higher loss, unless the purchaser gives us evidence of a lower loss. The same shall apply if after the conclusion of contract there should arise any clues as to a missing credit worthiness of the purchaser. Clues of this kind are in particular: Default in payment and suspension in payments, petition in bankruptcy or for institution of composition proceedings, transfer of ownership by way of security of current assets, unfavourable information of banks or credit institutions. In lieu of exercising our right to rescind the contract we can also demand securities in form of absolute guarantees or cash before delivery.

7) RESERVATION OF TITLE

7.0 The delivery of our merchandise shall be effected under reservation of title with the following extensions: Until payment in full of any present or future claims against the purchaser resulting from the business relation we shall retain title to all merchandise delivered. This shall also apply to the payment of specially described claims including the settlement of a balance on current account. The merchandise subject to reservation shall be stored properly and insured sufficiently against fire and theft; the corresponding conclusions of insurance contracts shall be submitted by the purchaser upon request.

7.1 The purchaser shall always revocably and as long as it complies with its obligations resulting from the contract towards us be entitled to alienate the merchandise subject to reservation of title in the ordinary course of business as follows: If the purchaser alienates the merchandise delivered by us or if the merchandise is delivered to a third party, irrespective of their value or state, the purchaser does already now assign to us herewith to the amount of the invoice value of our deliveries until the entire repayment of all our claims resulting from these deliveries of merchandise all and any claims against its customer arising from the alienation or delivery with all ancillary rights including the claims for damages resulting from the purchaser from the legal transaction of the resale.

In case of an assignment prohibition with regard to resale and default of payment the purchaser shall be obliged to inform its third party purchaser of the assignment of future claim. If the merchandise subject to reservation delivered by us are alienated together with other merchandise to a third party, the purchaser shall be obliged to separate the invoice items. As far as no separate invoice was made, that part of the asked overhead price shall be assigned to us which corresponds to the invoice value of our delivery.

7.2 The reservation of title with the extensions according to the foregoing dispositions shall even continue to exist if individual claims of the purchaser against its customers should be included in a current account. In this case the purchaser does already now assign to us the balance existing in its favour.

7.3 In case of default of payment of the purchaser we shall be able to fully exercise our creditor's right and shall be entitled to collect the sums due directly from the third party debtor.

7.4 Inadmissible are extraordinary dispositions of the purchaser such as pledge, assignment for security and transfer of ownership of the merchandise subject to reservation.

7.5 The purchaser shall be obliged to notify us immediately if any seizures of third parties on our merchandise and claims such as pledges and any other kind of impairments of our property are to be effected.

7.6 The purchaser shall be entitled to collect the assigned claim itself as long as it complies with its payment obligations existing with us.

7.7 If the value of the entire security provided to us resulting from the business relation should exceed our delivery claim by more than 20 % we shall, upon request of the purchaser, be obliged to return the assigned claims to this extent.

7.8 We shall be entitled at any time to request the return of the merchandise belonging to us. If we make use of this right a withdrawal from the contract within the limits of the Statute Covering Instalment Sales shall only exist if we expressly declare the same in writing.

8) WARRANTY - COMPLAINT

8.0 Only such properties shall be considered guaranteed which were guaranteed by us expressly in writing.

8.1 As for the rest, we shall be liable for defects concerning the delivery excluding any further claims only as follows: The purchaser shall be obliged to examine the merchandise immediately and diligently upon receipt and, if necessary, to realize random samples. Apparent defects irrespective of their kind, and the delivery of an obviously different merchandise than the one ordered or defects shall be claimed immediately i.e. immediately after their receipt and before use of the merchandise, however, within 2 weeks as of receipt of the merchandise at the latest, by registered mail. Even in case of complaint the purchaser shall be obliged to accept the merchandise, to unload and to store it properly. Defects which even in case of thorough examination were not detected at first shall be claimed and made known to us in the same way immediately after their detection. In case of notification of a defect not made in due form and/or in due time the merchandise shall be considered approved among merchants. The same shall apply if the purchaser gives the impression of being a merchant according to law. After expiration of 6 months as of passing of risk any claims of warranty against us shall lapse. We guarantee faultless material as well as professional manufacture of the merchandise delivered by us, do however not assume any liability for inappropriate use or treatment. Deviations customary in the trade and/or due to the manufacturing technique with regard to size, material, colour and design shall not entitle to object to the delivery. To allowable deviations - if any - the DIN standards and our works standards shall apply. In case of a defect which according to the foregoing dispositions we are liable for, the purchaser may at its discretion request a reasonable reduction of the purchase price or delivery of faultless merchandise; faulty substitute delivery shall entitle the purchaser as non-merchant to cancel the purchase too.

8.2 Any further claims, in particular claims for damages of the purchaser against us, our "Erfüllungsgehilfen" (persons employed by the debtor in the performance of his obligation) or vicarious agents for whatever legal reason, in particular for fault in connection with contract negotiations, delay, positive violation of contractual duty and tort, especially claims for compensation of consequential damage such as missed profit etc. shall be excluded, unless they were based on intent or gross negligence.

9) INDUSTRIAL PROPERTY RIGHTS

9.0 The copyrights and industrial property rights, if any, patents, ornamental designs and utility models concerning the models, forms and devices, designs and drawings as well as trademarks registered on our behalf created by us or a third party by our order shall be due to us even if the purchaser should have borne the costs for them.

10) DATA PROCESSING

We shall be entitled to process the data received by the purchaser on the basis of the business relationship according to the dispositions of the German Federal Data Protection Act.

11) ASSIGNMENT PROHIBITION

The assignment of claims against us acquired on the basis of a business transaction shall be excluded.

12) LEGAL CONSEQUENCES IN CASE OF NON-INCORPORATION

In case one or several dispositions of the foregoing terms should become invalid, the validity of the other dispositions and the remaining contract shall not be affected. Invalid dispositions, if any, shall be replaced by new dispositions of the same economic success and object. As far as dispositions have not become integral part of the contract the contents of the contract shall be subject to the legal prescriptions.

13) PLACE OF PERFORMANCE AND PLACE OF JURISDICTION

Place of performance for delivery and payment shall be Erlangen. In all cases even in case of all future claims resulting from the business relation including such resulting from bills, cheques and other documents Erlangen shall be place of jurisdiction, if the purchaser is a merchant or has, according to law, given the impression of being a merchant in the meaning of the German Commercial Code (HGB).
